☐ ATSDR

☒ State Agency

☐ Other

DISCUSSION:

The Preliminary Assessment (PA) report for the Naval Station Ingleside, Texas prepared by the Department of the Navy was reviewed. A PA was conducted at this facility because the facility applied for hazardous waste generator permit. In addition, RCRA section 3010 requires waste generators, transporters, and TSD facility owner/operators to notify EPA of their hazardous waste activities. The information gathered during the PA showed that no significant release of hazardous substances has occurred. Therefore, the facility poses no threat to human health or the environment.

The PA report was evaluated considering the requirements of the Hazard Ranking System (HRS), the primary screening tool used by EPA's Superfund program to assess the relative threat associated with actual or potential releases of hazardous substances.

A decision of "No Further Remedial Action Planned" (NFRAP) under Superfund will be entered in CERCLIS.

Based upon currently available information, this site fails to meet the minimum criteria required to be included, or proposed, at this time on the NPL by the EPA. The NPL is EPA's list of sites that are priorities for further investigation and, if necessary, response action under CERCLA, 42 USC 960001 et seq. Other actions maybe appropriate under the State and Department of the Naval Authorities.
